STRATOS DRONES 100% OPEN SOURCE

WORKSHOPS & TALKS

The science of drones

One project — every subject.
Learn by doing: you code, design, print, solder… and it flies.

WHAT YOU LEARN BY BUILDING A DRONE

💻 **Programming**
Code flight missions — blocks to start, then Python.

📐 **CAD & Design**
Model and design the parts in 3D.

🖨️ **3D printing**
Make the frame and the prop guards.

🔌 **Electronics**
Sensors, boards, power — see what makes it fly.

🔥 **Soldering**
Assemble your very own components.

🛩️ **Physics & piloting**
Lift, stability, sensors… and a simulator before you fly.

🤖 **Robotics**
Autonomy, sensors and swarm flight.

🧮 **Maths & logic**
Coordinates, angles, distances, problem-solving.

WHO IS IT FOR?

Kids · Teens · Adults · Seniors · Curious

All ages, all levels — beginners welcome. From kids to seniors: scientific discovery, hands-on learning, sharing and connection.

POSSIBLE FORMATS

- Taster session (1–2 h)
- Workshop series
- Demo / event
- Project “a drone that flies”

Interested? Let's talk.
